

# Recirculating Down-Back Draft Workstation

Mopec's BF400 Workstation is a compact, self-contained countertop dual-draft workstation designed for small labs performing dissection, trimming, and staining procedures. It has a shelf on top with a light beneath it, and an adjustable speed blower system. It comes with potassium permanganate filters, with optional charcoal replacement filters. The front access panel makes the filters easy to replace. The blower system filters the air and recirculates it back into the room.

BF400
