

Wax Hardener for Snow Impressions

This Wax Hardener for Snow Impressions is used to prepare and protect impressions found in snow prior to and during casting. Formulated to prime, seal, and stabilize delicate impressions, it helps prevent distortion, melting, and excess moisture from affecting the casting process.

FS386 and FS387

SPECIFICATIONS

Construction

- Help in taking cast impressions on delicate snow
- Created to prime, seal, and protect delicate impressions before and during the application of a casting material

Performance

- Spray a few coats of the wax on the impression, wait for it to harden, and then cast the impression
- Protects against melting and seal out excess water that might dilute the casting mix

Options & Accessories

- FS380: Advanced Tire and Footprint Plaster Kit
- FS381: Advanced Tire and Footprint Dental Stone Plaster Kit

Variations

Model No.	Description	Capacity
