

Poly-Coated Barrier Paper

This is a forensic packaging material designed to provide a strong moisture- and contamination-resistant layer for protecting evidence during collection, storage, and transport; the polyethylene coating helps create a durable barrier that preserves the integrity of sensitive materials by shielding them from environmental exposure while maintaining handling efficiency in forensic workflows.

FT288

SPECIFICATIONS

Construction

- Uniquely designed to provide the investigator with a multi-functional cross-contamination tool
- Can be used in roll form or from paper cutting dispensers

Dimensions

- 36" x 250'

Materials

- Poly-coated paper

Performance

- Poly-coating ensures that blood will not penetrate through
- Can use as placement between clothing during transport, for example preventing cross-contamination
